

What is claimed is:

1. A container including a cover member and a body member with a cavity adapted to contain an aerated beverage, wherein said body member and said cover member are releasably engageable with each other in an air-tight manner, and wherein when said body member and said cover member are engaged with each other, at least a part of said cover member extends into said cavity of said body member to increase the air pressure in said cavity above atmospheric pressure.
2. A container according to Claim 1 wherein the cover member includes a sealing member for providing an air-tight effect when said body member and said cover member are releasably engageable with each other.
3. A container according to Claim 1 wherein said cover member includes at least two protruding members for engagement with channel members of said body member for releasably engaging said cover member with said body member.
4. A container according to Claim 3 wherein at least one said channel member has two portions which are generally perpendicular to each other.
5. A container according to Claim 1 wherein the cover member includes an opening releasably closable by a closure member.
6. A container according to Claim 5 wherein said closure member is made of a resilient material.
7. A container according to Claim 6 wherein said closure member is swivellable about an axis substantially parallel to the longitudinal axis of said cover member.
8. A container according to Claim 5 wherein said opening is adjacent a drinking spout of said cover member.
